

A. Seed Bank B. Breathe!

1. state area - the seed bank is made of electrostatically painted metal frames and finished with surfaces of braided hazelnut canes. visitors can sit on the bench and see I can rest/relax, experiencing the garden atmosphere created inside the gallery; the height of the structure is approximately 50 cm, being designed to withstand the flood without being removed from the gallery, both the surface of the sticks and the painted steel in the electrostatic field resisting the interaction with water.

2. projector built into the bench - projects onto the white surface of the ceiling and can be quickly removed in case of flooding.

2a. micro-dioramas with leguminous plant seeds from seed banks in Romania; containers can be easily removed in case of flooding.

3. the surface made of braided hazelnut canes, is placed both vertically and horizontally, expressing the idea of the garden; because the material is natural and encompasses the entire room, the space it will have a garden, wood smell

4. the modular metal structure made of 3 cm profile steel with the role of supporting the structures of natural braids and of support for ventilation and sound systems, which recreate the environment of a natural garden.

5. sound system - sound speakers, each equipped with a stick; each speaker reproduces a sound from nature; are 10 speakers, so 10 recorded and digitized sounds, each put in a loop, throughout the exhibition program; their use, mounting and feeding is extremely simple; the volume of these speakers is low-medium, existing a small sound mixer, for the correct adjustment of the sounds.

6. system of fans (12 pieces) adjusted to a medium speed, located behind the braiding surfaces - they are not visible to visitors - the air currents express the concept of Breathing Space, as well as thermal regulation inside the gallery (in Venice, May-October, it is very hot).

7. the main windows are free, allowing the gaze of passers-by to penetrate inside the gallery

8. the side vents are closed with the surfaces made of braids; each showcase has a light fixture at top that illuminates day and night textured wood surface; this becoming a signal for space-bar.

9. thin projection surface made of white textile material - fixed on the three sides of the metal structures; material it has a metal frame - 1cm profile, which ensures flatness and support on three sides.

10. QR code - direct access to the online platform at Instant Gardens/ the code posted here is not valid.
