

1) Recipiente romanesti pentru transportul si detectarea substanelor radioactive - din patrimoniu Muzeul Tehnic.

2) Un lan de porumb. Pe langa faptul ca este un cliseu in lumea cinematografiei hollywoodiene (mai ales in cazul filmelor SF si dramatice), prezentam un studio- cercetare realizata in anii 1980, pe o cultura de prumb de langa un ansamblu industrial poluant; cultura de porumb s-a dezvoltat chiar si in mediul poluant; a redus nivelul de poluare, iar fructul a ramas bun pentru consum agro-alimentar.

1) Romanian containers for the transport and detection of radioactive substances, - heritage of the Technical Museum.

2) A field of corn. Besides the fact that it is a cliché in the world of Hollywood cinema (especially in the case of sci-fi and dramatic films), we present a studio-research made in the 1980s, on a lead culture near a polluting industrial complex; corn culture has developed even in the polluting environment; reduced the level of pollution, and the fruit remained good for agri-food consumption.
